

Software Overview

The latest version of Avista Advisor represents an industry first – the first RO chemical calculation program that includes ALL the formulated chemicals. Avista Advisor 3 includes:

- Antiscalant calculation using either raw water or brine analyses
- Design capability for biocides, coagulants and cleaning chemicals
- Design capability for dechlorination and if desired pH modification
- Chemical dosing equipment sizing calculations
- Chemical consumption calculations along with cost calculations

Avista Advisor 3 is available from your Avista representative who will train you in the use of the software. A user guide is included in this section for your reference.
